

::: CGIS GREEN PROGRAM

CGIS Is Green:

We have implemented various measures to make CGIS more sustainable. Here are just a few examples:

- Weekend and night temperature setbacks and changing temperature set points
- Real-time temperature metering
- Daily programming of the HVAC equipment
- Variable Speed Drives (VSD) on the HVAC equipment, so that they only run when needed (for instance, air handlers only run 8 am-7 pm)
- Lighting control system: motion sensors in all offices and seminar rooms; common space lighting scheduled to switch off at night
- Increased recycling bins and signage
- Composting bins are available on demand, in the café, and in some offices
- Low flow toilets and faucet aerators
- Green cleaning chemicals, products, and practices (cleaning chemicals, recycled paper products, green hand soap, etc.)
- Environmental audits of buildings
